
5c_run_prog

Code ▾

1. Open a file to edit

1. use IDE
2. in R console: `edit(file="ch2-apply.r")` : invoke the built-in text editor and open an ASCII file

2. Run commands in file

1. `source`

1. syntax:

```
source(<file_path>, echo=T)
```

1. `echo=T` will echo these commands to the screen

2. idea: is similar with running the same command in console. Can still use the variables in the file

3. debugging:

See tut5

1. `browser()` , `breakpoints`
2. `message()` and `sink()`
